

CLAIMS

1. A conveyor transfer structure for use with loads resting on a slipsheet, the transfer structure comprising:
 - (a) fixed-position rollers for contact with the slip sheet and
 - (b) movable position rollers movable between first positions supporting portions of the slipsheet and second positions permitting lift truck platen contact with the portions of the slipsheet.
2. The conveyor transfer structure of claim 1, wherein the movable position rollers remain in contact with the slipsheet in the second positions.
3. The conveyor transfer structure of claim 1, wherein the movable position rollers move out of contact with the slipsheet in the second positions.
